# TaxIQ

Your better tax regime and your next three moves, in 2 minutes and with no documents

A tax-planning module for a fintech app: strategy, MVP, prototype and forecast

**150K activations, ~2,700 sales**
Season-1 forecast, Dec 2026 to Jul 2027

The Product Sprints capstone | Product Club, IIT Kanpur

# Users leave before they get a personal answer, and that one gap blocks all four goals

## Problem hypothesis

Tools today are fast but generic (calculators, reels) or personal but slow (filing flows that need Form 16 and AIS). With no quick personal answer there is no trust moment, so users share no data and never see an offer that fits them.

**72%**

of 7.28 crore filers already chose the new regime (AY 2024-25). The other 28%, and everyone who never checked, face a break-even calculation they cannot do in their head.

## 5 Whys

1. Why do users leave without a plan? They never reach a result about them.
2. Why not? It takes many jargon-heavy inputs: HRA, 80C, 80D, home loan.
3. Why so many? Tools mirror the ITR form, not the user's decision.
4. Why worse now? The right regime hinges on a break-even users can't compute.
5. Why does it matter? No answer, no trust, no consented data, no relevant offer.

**Root cause: a personalisation-speed gap**

No tool gives a personal answer in under 2 minutes

# Start with salaried 22-to-45s: the biggest group facing the regime choice every year

**7.28 cr**

ITRs filed by 31 Jul 2024 (AY 2024-25)

**3.34 cr**

were ITR-1: salaried, simple income. Our beachhead

**Rs 12.75L**

salary is now tax-free in the new regime, so the old regime needs big deductions to win

### Ananya, 24

Fresher, Bengaluru, Rs 9 lakh

*When HR asks for my regime declaration, I want a clear answer for my salary, so I can submit without second-guessing.*

**TaxIQ: new regime, Rs 0 tax, saves Rs 39,370**

### Rohit, 34

PM, Pune, Rs 22 lakh, home loan

*When the March deadline nears, I want to know exactly what to top up, so I don't overpay tax or lock money into the wrong product.*

**TaxIQ: new regime saves Rs 87,100**

### Meera, 29

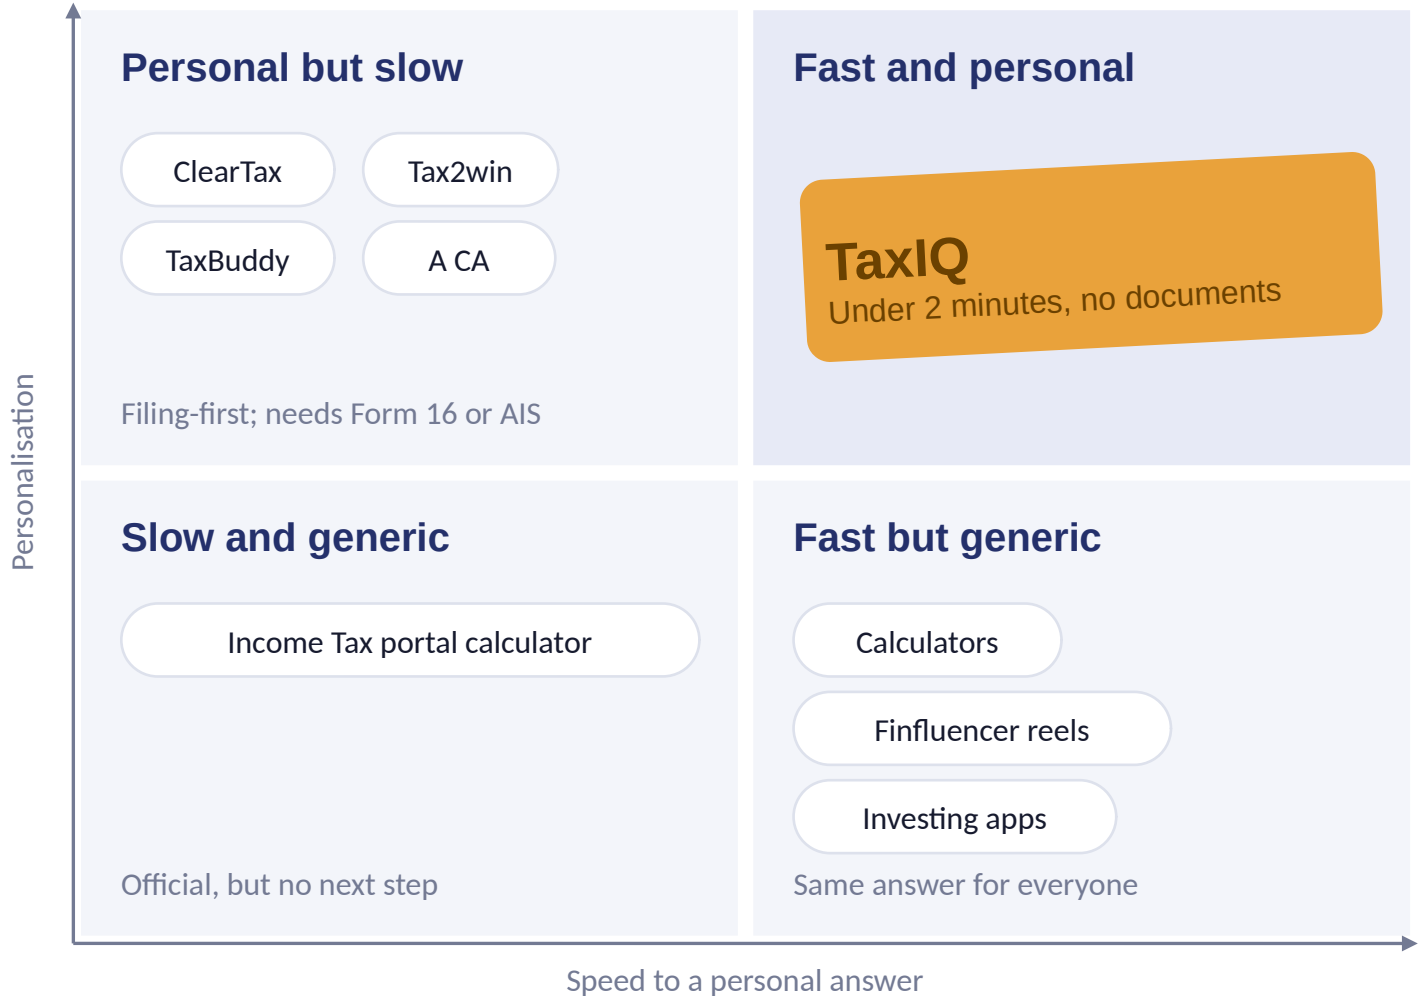

Freelancer, Jaipur, Rs 14 lakh (Phase 3)

*When a quarter ends, I want to know what tax I owe, so I avoid interest and filing stress.*

**TaxIQ: new regime saves Rs 93,600**

Not for: traders and high earners with capital gains, F&O, crypto or foreign income. TaxIQ flags them and routes to assisted filing.

# Everyone trades speed for personalisation; fast and personal is empty

## Value proposition

*"Know your better regime and your next three moves in 2 minutes. No documents, no jargon."*

**Pain relievers**

- No Form 16 needed
- Plain words, not section numbers
- Break-even shown in rupees

**Gain creators**

- A shareable result
- Reminders before every deadline
- Offers only when they close a gap

# The MVP: a 4-step quiz that ends in an Old vs New comparator and three ranked moves

**1**
### About you
Salaried or self-employed; age band

**2**
### Income
Salary slider; complex-income flag

**3**
### What you have
Rent, 80C, health cover, home loan, NPS

**4**
### What matters
Goals; how you file today

**Result**
Tax under each regime, saving, break-even, top 3 moves

## Worked example: Rohit, Rs 22 lakh salary

| | Old regime | New regime |
|---|---|---|
| Deductions beyond standard | Rs 4,75,000 | Rs 0 |
| Taxable income | Rs 16,75,000 | Rs 21,25,000 |
| Tax incl. 4% cess | Rs 3,27,600 | **Rs 2,40,500** |
| Break-even deductions | Rs 7.55 lakh | n/a |

**Saves Rs 87,100**

## Prioritised with MoSCoW for Season 1

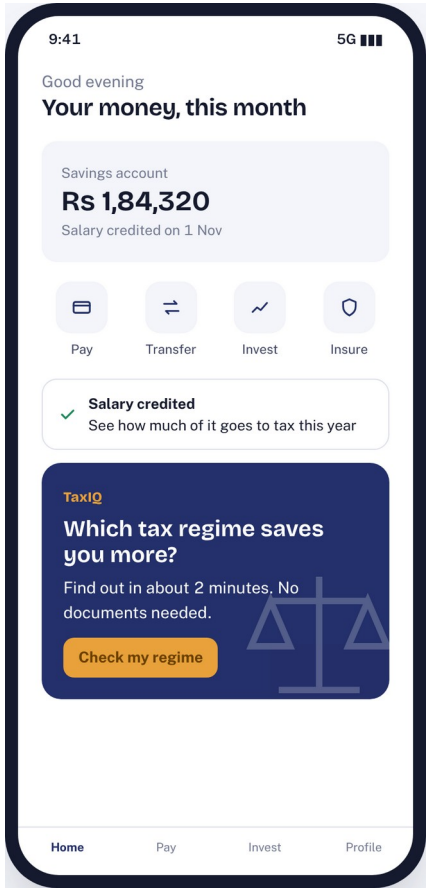

**Must** — Quiz, FY 2026-27 tax engine, comparator, top 3 moves, consent, reminders, offers, analytics

**Should** — Share card, 60-second explainers, Hindi + 2 languages, complexity router

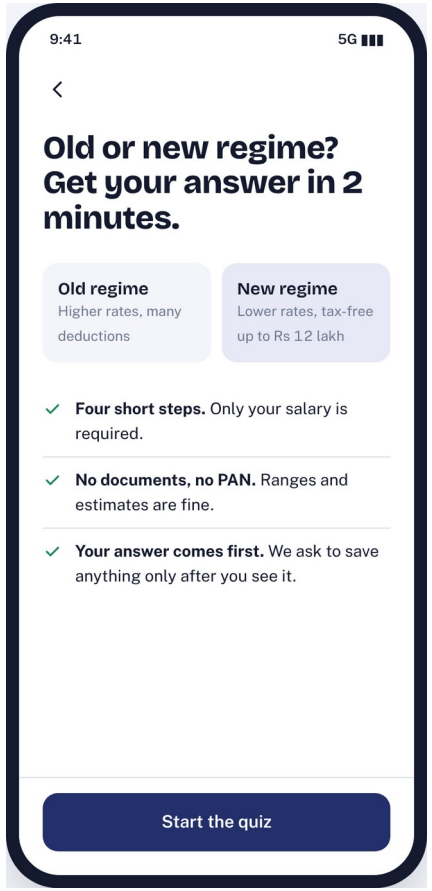

**Could** — Tax-saving tracker, bank-data pre-fill, Form 16 upload, Ask-a-CA

**Won't** — Full ITR filing in-module; capital-gains computation

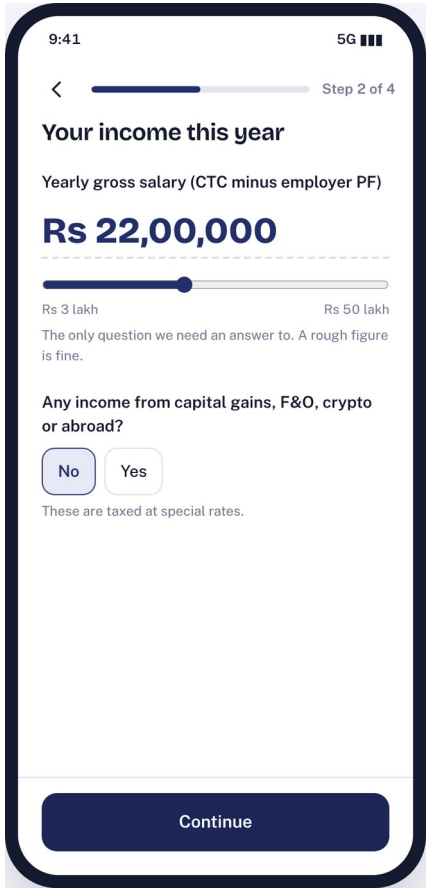

# Prototype: from the home screen to the answer in four short steps

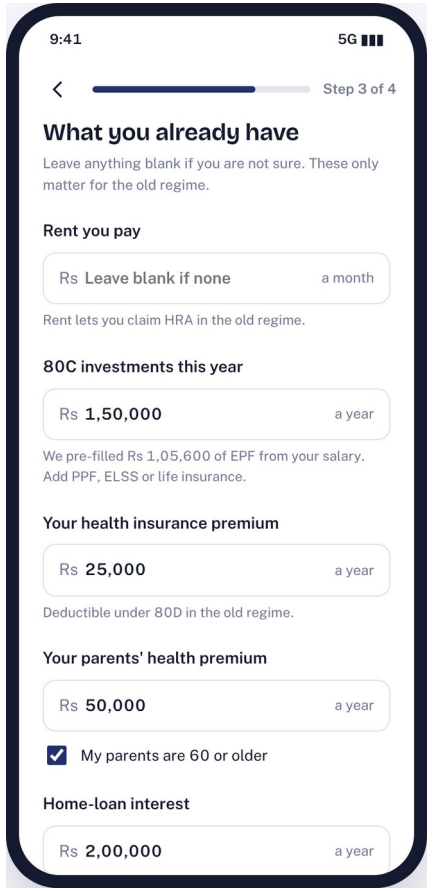

Entry: home banner and salary-day nudge

Landing: one question, no documents

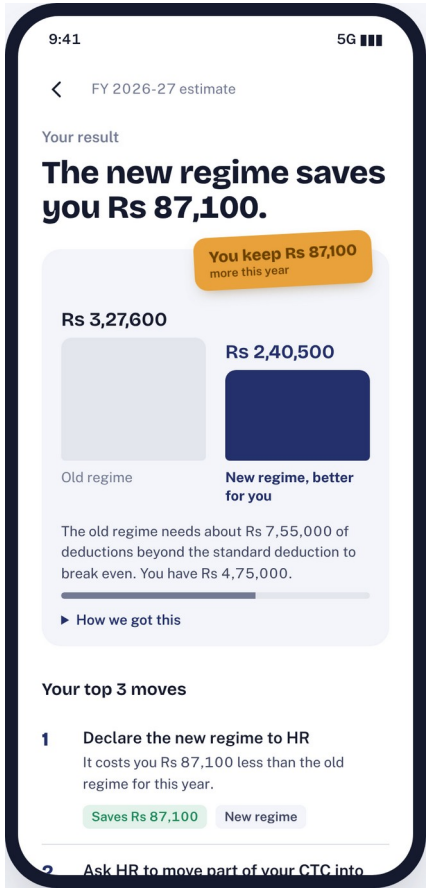

Step 2: salary is the only required input

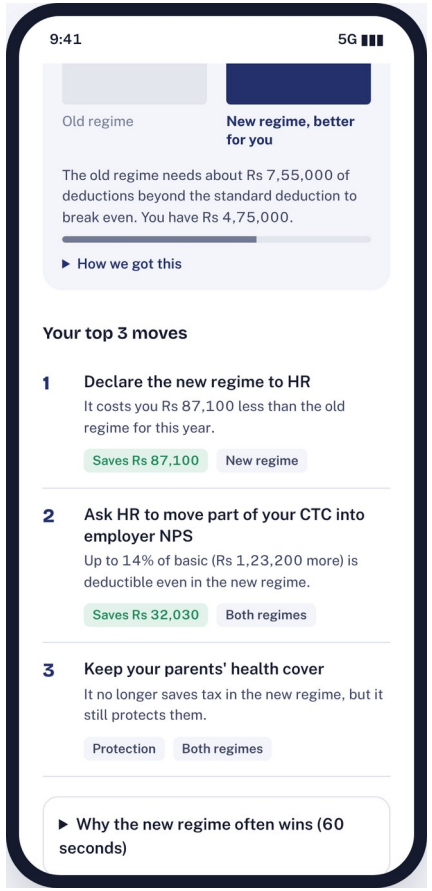

Step 3: EPF pre-filled; blanks allowed

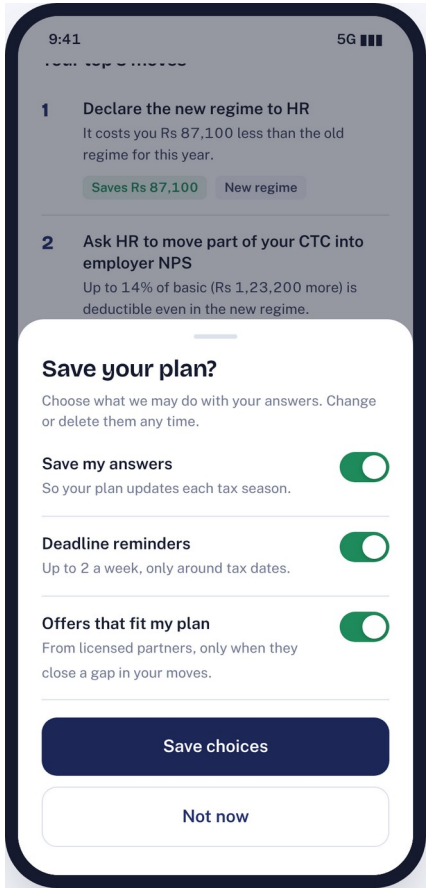

# The answer comes first; consent, reminders and offers follow it

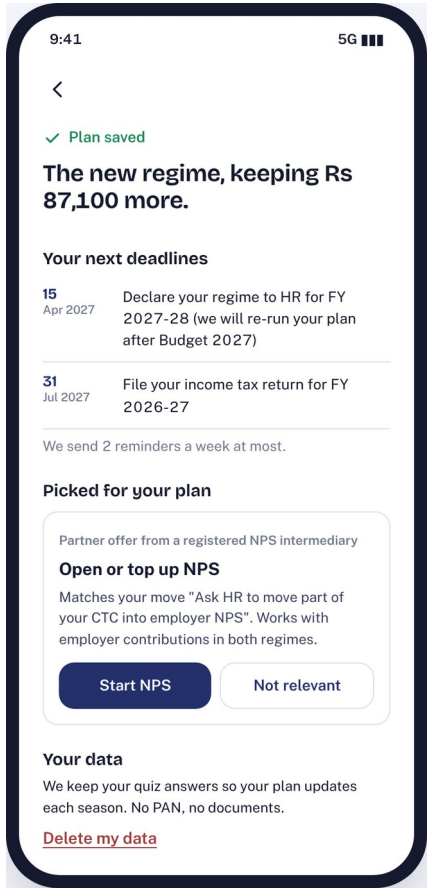

Comparator: tax under each regime and the saving

Top 3 moves, ranked by rupee impact

Consent per purpose, asked after the answer

Saved plan: deadlines and one matched offer

# RICE sets the order, MoSCoW the scope: three gated phases climb the AARRR funnel

| Feature | Reach (K) | Impact | Conf. | Effort (pw) | RICE |
|---|---|---|---|---|---|
| Quiz + comparator | 300 | 3 | 80% | 4 | **180** |
| Deadline reminders | 90 | 2 | 80% | 1 | **144** |
| 60-second explainers | 600 | 0.5 | 80% | 2 | **120** |
| Top 3 moves | 150 | 3 | 70% | 3 | **105** |
| Share card | 150 | 1 | 50% | 1 | **75** |
| Personalised offers | 90 | 2 | 70% | 3 | **42** |
| Bank-data pre-fill | 100 | 2 | 50% | 6 | **16.7** |

Offers score 42 but are a Must: monetisation is a module goal. They ship last because they need consented data and partner contracts.

## Phase 1: Activate

Dec 2026 to Jan 2027 | Acquisition + Activation

Engine, quiz, comparator, top 3 moves, explainers, analytics, SEO pages

◆ Gate 1: 50%+ completion, result in 120 s, engine passes all tests

## Phase 2: Engage

Feb to Mar 2027 | Retention + Referral

Consent and saved profile, reminders, share card, languages, complexity router

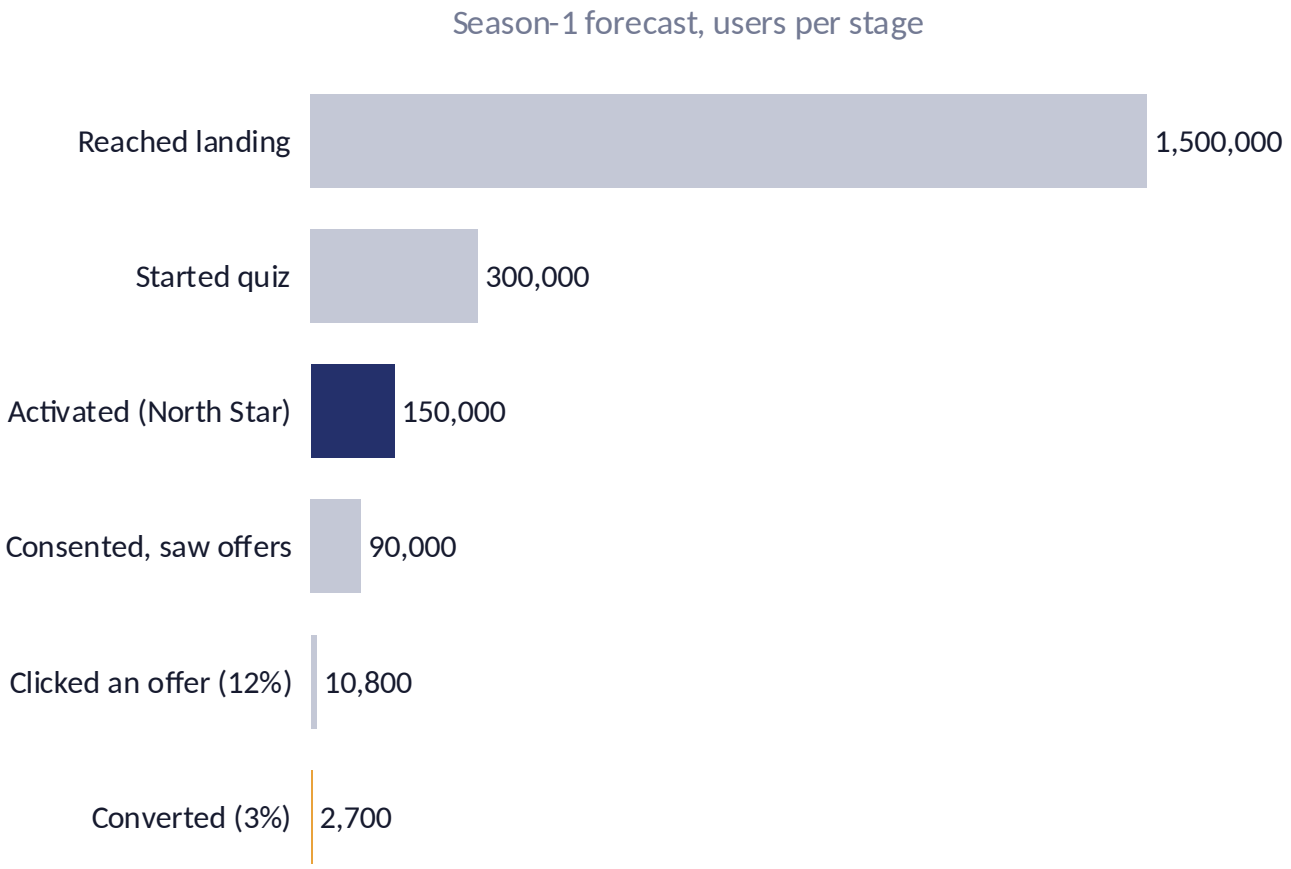

◆ Gate 2: 50%+ consent, 25%+ return within 30 days

## Phase 3: Monetise

Apr to Jul 2027 | Revenue

Personalised offers, filing-service handoff, tracker, pre-fill pilot

# Forecast: 150K activations, then a 12% to 3% cross-sell funnel to ~2,700 conversions

| | |
|---|---|
| **North Star** | Personalised plans delivered: quiz done and result seen |
| **Activation** | 50% quiz completion; median result in 120 s or less |
| **Data** | 60% consent after the answer |
| **Retention** | 30% return within 30 days; 10% share their card |

**~Rs 27 lakh in Season 1**
at an assumed Rs 1,000 per conversion

# Go-to-market: product-led first, content-led for reach, partners for scale

| | | |
|---|---|---|
| **Product-led** | In-app banner in proof (Jan) and declaration (Apr) seasons; salary-day nudge; entries inside invest and insure flows | Phase 1 |
| **Content-led** | "Old vs new regime calculator FY 2026-27" SEO pages that open into the quiz; 60-second explainers | Phase 1 |
| **Community** | Two or three finfluencer collaborations around the comparator; college and alumni groups for first-jobbers | Phase 1-2 |
| **Referral loop** | Share card with regime and savings band, never income; deep link back to the quiz | Phase 2 |
| **B2B2C pilot** | HR partners link TaxIQ in regime-declaration emails | Phase 3 |

## Biggest risks

- A wrong tax figure: CA-verified test suite, "report a wrong number"
- 72% already on the new regime: lead with protection, employer NPS and filing
- Seasonality: advance-tax and Budget-day hooks, saved profile wakes each season

**Next: 8-user test of the prototype and a landing A/B**
